EDUCATION

Eindhoven University of Technology

Bachelor of Engineering

Major in Computer Science and Engineering

Eindhoven, The Netherlands

Sep 2020 - Jul 2024

International Computer High School of Bucharest

High School Diploma

Bucharest, Romania

Sep 2016 - Jul 2020

WORK EXPERIENCE

Momo Medical

Software Engineer

Delft, The Netherlands

May 2025 – Present

- Part of the core team behind a notification system running in several countries, currently delivering around 4 million notifications per day.
- Helped migrate the system from ECS to an event-driven serverless architecture on AWS Lambda, DynamoDB, EventBridge and S3, written in TypeScript and Node.js and now running in production.
- Designed domain logic turning noisy sensor data into dependable alerts, including race-condition-safe handling across concurrent Lambdas.
- Refactored the domain logic behind notification suppression system-wide, so overlapping rules defined at multiple levels evaluate consistently.
- Provisioned infrastructure with AWS CDK and CloudFormation, automated deployments through GitHub Actions, and monitored the system with CloudWatch and Grafana.
- Shared the engineering on-call rotation, contributed to architectural and planning decisions, and interviewed candidates as part of hiring.

Webador, Jouwweb

Back-end Software Developer

Eindhoven, The Netherlands

Oct 2022 – Jul 2024

- Contributed to feature creation, bug fixes and creating tests for a large monolithic PHP code-base built on Laminas.
- Focused on features related to domain creation, internationalization, AI, security and API design.
- Took part in key processes as part of a large team of developers.

CERTIFICATIONS

AWS Certified Solutions Architect – Associate

Amazon Web Services (SAA-C03)

Jul 2026

Valid through Jul 2029

UNIVERSITY PROJECTS

Indoor Navigation System

May 2024

- Indoor navigation system for warehouse pickers, built with Scrumble and PolyesterShoppen BV as the final software engineering project (2IPE0) at the TU/e.
- Laravel back-end handling order assignment and path optimization over a logical model of the warehouse, a React Native app showing pickers their routes, and a Python module for indoor localization via Bluetooth beacons.

Video Game and Real-Life Game Development

Nov 2022

- Responsible for game programming across the Game Design course track at TU/e (DZC10, DZC20, DZC30).
- A Unity game featuring a shapeshifting dog, a promotional platformer for TU/e's Industrial Design department, and a websocket-based live tag game played on players' own phones.

AI Detection of Thoracic Diseases in X-ray Scans

Sep 2022

- Experimented with different CNN architectures and implemented DenseNet, achieving a 49% F1 score using only 256 low-quality images.

ADDITIONAL

Technical Skills: TypeScript, Node.js, Python, SQL, PHP, HTML/CSS. Working knowledge of Java, C#, C, C++

Cloud & DevOps: AWS (Lambda, DynamoDB, EventBridge, S3, ECS), AWS CDK, CloudFormation, GitHub Actions, CloudWatch, Grafana, Docker

Architecture: Event-driven and serverless design, Domain-Driven Design, distributed systems, API design

Frameworks: Laravel, Symfony, Laminas, Django, React, ASP.NET

Practices: Scrum, Agile, CI/CD

Languages: Fluent in English and Romanian, Intermediate: Turkish, Beginner: Dutch
